Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 October 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, and 3-4 are rejected under 35 U.S.C. 102(e) as being anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over DIBIE et al (5,531,788).

Art Unit: 3731

FIG. 2

FIG. 3

As to claims 1 and 3-4, DIBIE (Figs. 1-3, 5-6 and 9; column 8, lines 25-28) discloses a flexible helical coil (1) for use with a wire/cable (19). The coil has a distal end (5) and a proximal end/a second coupling member (6) detachably coupled/interlocked to the distal end/the 1st coupling member (18) of wire/cable (19) (Fig. 9). The coil comprises one winding (3) (shown in Figs. 2-3) or a multiplicity of windings (3) (not shown, but DIBIE discloses in column 8, lines 25-28 that the device can have a number of windings of more or less than three windings) of a 1st diameter (d3) immediately adjacent of the distal end (5) and the proximal end (6) of the coil. The coil further is wound into a 2nd diameter (d2)/(d4) smaller than the 1st diameter (d3) as shown in Fig. 3, whereby the proximal end (6)/the 1st coupling member and the distal end (5) of the coil are positioned radially inwardly of the immediately adjacent 1st diameter (d3) as shown in Fig. 2.

Alternatively, DIBIE does not explicitly show a multiplicity of windings (3) of the 1st diameter (d3) in the drawings, however, according to the disclosure (column 8, lines 25-28), it would have been obvious to one of ordinary skill in the art to have a multiplicity of windings (3) such as two or three windings (3) as this configuration would be well within the scope of DIBIE's invention.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

WENSEL et al. (U.S. Pat. 5,895,398) shows in Fig. 7 a helical coil (40) having a distal end and a proximal end disposed radially inwardly of windings of larger diameter immediately adjacent to the distal and proximal ends of coil (40).

KUEPICKI et al. (U.S. Pat. 5,980,514) shows in Fig. 9b a helical coil (224) having a distal end and a proximal end disposed radially inwardly of windings of larger diameter immediately adjacent to the distal and proximal ends of coil (40).
